

Name:

1. Compute $\frac{\partial f}{\partial y}$ if

$$f(x, y, z) = e^{-x^2y} + \ln(y+z) + \sin\left(\frac{x}{z}\right)$$

$$\frac{\partial f}{\partial y} = -x^2 e^{-x^2 y} + \frac{1}{y+z}$$

2. For a function $f(x, y)$ you know that

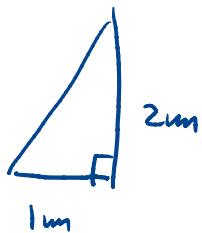

$$\begin{aligned} f(2, 3) &= 9 \\ f_x(2, 3) &= 3 \\ f_y(2, 3) &= -1. \end{aligned}$$

Use this information to estimate $f(2.1, 3.2)$.

$$L(x, y) = f(2, 3) + f_x(2, 3)(x-2) + f_y(2, 3)(y-3)$$

$$\begin{aligned} f(2.1, 3.2) &\approx L(2.1, 3.2) \\ &= 9 + 3(2.1-2) - (3.2-3) \\ &= 9 + \frac{3}{10} - \frac{2}{10} \\ &= 9 + \frac{1}{10} \end{aligned}$$

3. A right triangle has width 1m and height 2m with an error in the measurements of ± 0.02 m. Estimate the error in the area using a differential.

$$A = xy$$

$$dA = (dx)y + x dy$$

$$= (0.02) \cdot 2 + 1 \cdot (0.02)$$

$$= 0.04 + 0.02$$

$$= \boxed{0.06 \text{ m}^2}$$
