- 7. Let  $f \ge 0$  be Riemann integrable. In this exercise you will show that f is measurable. In your work, you are welcome to use the obvious fact that the Riemann integral and the Lebesgue integral agree for step functions.
  - a) Show that there exists a monotone increasing sequence of step functions  $\varphi_n$  and a monotone decreasing sequence of step functions  $\psi_n$  such that  $\varphi_n \leq f \leq \psi_n$  for each *n* and such that

$$(R)\int_a^b(\psi_n-\varphi_n)\to 0.$$

- **b)** Let  $\Phi = \sup \varphi_n$  and  $\Psi = \inf \varphi_n$ . Show that  $\Psi \Phi = 0$  almost everywhere.
- **c)** Conclude that *f* is measurable.
