

For each limit in problems 1 through 5, verify that the expression is of the form $0/0$ at the limit point. Then compute the limit using the "Limits don't care about one point" rule. For each limit computation, start by writing out the expression

$$\lim_{x \rightarrow a} f(x) =$$

for the specific values of f , a and x . Then carry on from here. Circle the equality in your computation where the "Limits don't care about one point" rule gets used. See the example on the board for a template.

1. Compute $\lim_{h \rightarrow 0} \frac{(3+h)^2 - 9}{h}$.

2. Compute $\lim_{h \rightarrow 0} \frac{\frac{1}{2+h} - \frac{1}{2}}{h}$.

3. Compute $\lim_{h \rightarrow 0} \frac{\sqrt{2+h} - \sqrt{2}}{h}$.

4. Compute $\lim_{x \rightarrow 3} \frac{\frac{1}{x} - \frac{1}{3}}{x - 3}$.

5. Compute $\lim_{x \rightarrow 2} \frac{x^3 - 8}{x - 2}$.

6. Compute $\lim_{x \rightarrow 0} x \sin(1/x)$.

7. Compute $\lim_{x \rightarrow 6^+} \frac{6 + |x|}{6 - x}$.

8. Compute $\lim_{x \rightarrow 6^-} \frac{6 + |x|}{6 - x}$.
