

1. Justify

$$\lim_{x \rightarrow 5} \frac{x^2 - 6x + 5}{x - 5} = 4$$

using the "Limits don't care about one point" rule.

$$\begin{aligned}
 \lim_{x \rightarrow 5} \frac{x^2 - 6x + 5}{x - 5} &= \lim_{x \rightarrow 5} \frac{(x-5)(x-1)}{(x-5)} && \text{limits don't care} \\
 &= \lim_{x \rightarrow 5} x - 1 && \text{direct subs.} \\
 &= 5 - 1 \\
 &= 4
 \end{aligned}$$

2. Compute

$$\lim_{h \rightarrow 0} \frac{\sqrt{4+h} - 2}{h}$$

using the "Limits don't care about one point" rule. Hint: Multiply top and bottom by  $\sqrt{4+h} + 2$  early in the computation.

$$\begin{aligned}
 \lim_{h \rightarrow 0} \frac{\sqrt{4+h} - 2}{h} &= \lim_{h \rightarrow 0} \frac{\sqrt{4+h} - 2}{h} \cdot \frac{\sqrt{4+h} + 2}{\sqrt{4+h} + 2} \\
 &= \lim_{h \rightarrow 0} \frac{4+h - 4}{h(\sqrt{4+h} + 2)} \\
 &= \lim_{h \rightarrow 0} \frac{h}{h(\sqrt{4+h} + 2)} \\
 &= \lim_{h \rightarrow 0} \frac{1}{\sqrt{4+h} + 2} = \frac{1}{\sqrt{4+0} + 2} = \frac{1}{4}
 \end{aligned}$$

limits  
don't  
care

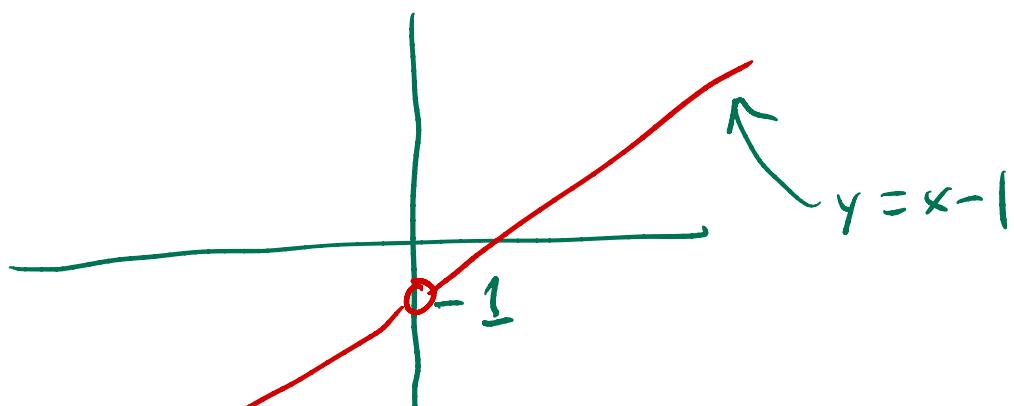

3. Suppose  $f(x) = x \left(1 - \frac{1}{x}\right)$

a) Why is 0 not in the domain of  $f(x)$ ?

$\frac{1}{0}$  is not defined

b) Sketch the graph of  $f(x)$ .

Since  $x \left(1 - \frac{1}{x}\right) = x - 1$  except at  $x=0$

c) Compute  $\lim_{x \rightarrow 0} f(x)$ .

$$\lim_{x \rightarrow 0} x \left(1 - \frac{1}{x}\right) = \lim_{x \rightarrow 0} x - 1 = -1$$
